

MONEY AND DIGITAL ASSETS

MODULE 1.1 FIELD LAB

Name the job. Locate the ledger. Test the claim.

COGNIZEN CONSULTING

Classify the immediate function

An object may perform several monetary functions. For each situation, name the function being used right now and explain your reasoning.

SITUATION	MEDIUM OF EXCHANGE / UNIT OF ACCOUNT / STORE OF VALUE	WHY?
A cafe lists coffee at R38.		
A learner pays the cafe by card.		
A household keeps an emergency reserve.		
Two laptops are compared at R12,000 and R18,000.		
A business records revenue and expenses in rand.		

Where does trust sit in these examples?

Compare three digital balances

Digital does not mean decentralised. Complete each column before deciding which system is preferable for a particular purpose.

QUESTION	BANK DEPOSIT	CENTRAL-BANK MONEY	CRYPTOASSET
Who maintains the record?			
What claim does the holder have?			
Who controls access?			
How can an error be resolved?			
What is the main failure mode?			

Best system for this situation - and why

Scarcity is one input, not a verdict

Choose a real or fictional digital asset. Score the evidence without turning the exercise into a price forecast.

DIMENSION	0-100	EVIDENCE	WHAT WOULD CHANGE MY SCORE?
Supply rule credibility			
Ownership verification			
Sustained demand			
Operational security			
Rule durability			

My conclusion, stated with limits

Explain the module without slogans

Complete this page after the quiz. If you can explain these distinctions clearly, you have a usable foundation for Module 1.2.

Money is a system because...

A bank balance is digital but differs from a cryptoasset because...

Digital scarcity matters, but does not guarantee value, because...

The trust question I will carry into the next module is...

KEEP THIS

Name the function, locate the authority, and test every value claim against evidence.
