

CRYPTO MASTERY FIELD GUIDE

Purpose. Evidence. Safety. Progress.

COGNIZEN CONSULTING

Powered by NorthstarLabs

Thirty-one modules, five stages

Use this map to see where each topic belongs. The orientation is your starting line; Module 1.31 is your proof point.

ORIENT	1.1-1.4	Money, digital assets, Bitcoin origins and cryptocurrency definitions.
MECHANICS	1.5-1.20	Blockchains, decentralisation, assets, keys, wallets, exchanges, transactions, fees and stablecoins.
EVALUATE	1.21-1.24	Price, supply, tokenomics, volatility and the language used to frame claims.
PROTECT	1.25-1.30	Security, fraud, investment risk, responsible participation, regulation, tax and personal safety.
PROVE	1.31	A capstone decision and a next-stage learning plan.

The programme is educational. It does not promise a financial outcome and no exercise requires an asset purchase.

Learn. Do. Prove.

Every lesson should leave you with more than recognition. Use this rhythm to turn a short explanation into durable capability.

01 LEARN Build one useful mental model and name the distinction that matters.	02 DO Commit to a classification, decision, calculation or scenario before reading feedback.
03 PROVE Keep a reusable explanation, checklist, score, decision rule or capstone artefact.	04 REVIEW Use missed answers and uncertainty as a map for revision and contextual help.

MY WEEKLY RHYTHM

I will study on these days and times:

The proof item I will keep from each module is:

Choose a capability, not a prediction

A clear purpose helps you decide what to notice, what to practise and what evidence to keep.

I am taking Crypto Mastery so that I can...

I will know I am progressing when I can...

A real situation in which this capability matters is...

Date and commitment

Separate evidence from excitement

Use these questions whenever a lesson, influencer, project or market headline makes a strong claim.

01	What exactly is being claimed - technical fact, economic opinion or future prediction?	NOTES
02	What source supports it, and can I inspect the original evidence?	NOTES
03	What assumptions must remain true for the conclusion to hold?	NOTES
04	Who benefits if I believe or act on this claim?	NOTES
05	What evidence would change my mind?	NOTES
06	What important risk, dependency or alternative explanation is missing?	NOTES

Protect the learner before the lesson

These boundaries apply throughout the programme and should survive urgency, excitement and social pressure.

SECRETS	Never share a password, private key, recovery phrase, one-time code or authentication backup.
MONEY	No course exercise requires you to buy an asset, use leverage or risk real funds.
LINKS	Verify the destination and source before connecting a wallet, signing or downloading software.
IDENTITY	Minimise personal information in public posts and screenshots.
ADVICE	Education is not personalised legal, tax or financial advice. Use qualified professionals where needed.
PAUSE	Urgency is a risk signal. Stop, verify independently and ask for contextual help.

MY NON-NEGOTIABLE BOUNDARY

Keep one proof item per stage

Record the strongest output, the remaining uncertainty and the next action. This is more useful than a list of pages completed.

STAGE	BEST PROOF ITEM	WHAT REMAINS UNCLEAR	NEXT ACTION
Orient			
Understand			
Evaluate			
Protect			
Prove			

A strong finish is not certainty. It is a conclusion whose evidence, assumptions, limits and next actions are visible.
